

Weekly Progress Report

Week 31 — Final Report Draft v10 Revision & Template Alignment

Student ID: 11314389

BCI Control System Project

April 21, 2026

Week 31 Agenda — Final Report Consolidation

This Week's Main Work

- ① Rewrite the **Methodology** chapter based on the annotated feedback on the draft report.
- ② Check the report against the **3YP Handbook** and the official **Report Template**.
- ③ Move the draft from a content-focused revision to a more submission-ready structure:
 - front matter,
 - chapter order,
 - appendices,
 - GitHub/repository evidence.
- ④ Resolve the final issues identified during re-review:
 - Project Management location,
 - over-strong claims in Discussion,
 - Figure 1 readability,
 - risk-assessment appendix references.

Outcome

Final Report Draft v10 has now been generated, restructured, and recompiled. The current PDF is 31 pages and is much closer to the handbook/template expectations than the previous draft.

1. Methodology Revision Based on Feedback

Main Problems in the Previous Draft

- Methods and results were mixed together.
- Reproducibility details were incomplete.
- Some claims were too strong relative to the evidence.
- Dataset, preprocessing, and training protocol boundaries were unclear.

Core Revision Goal

The chapter should read as a **reproducible Methods chapter**, not as “methods + partial results + interpretation”.

Changes Implemented in v10

- Results removed from Chapter 3 and concentrated in Chapter 4.
- Dataset table expanded with channels, sampling rates, class counts, and protocol.
- Preprocessing now specifies 8–30 Hz filtering, epoching, and normalisation.
- EEGTransformer section now includes architecture figure, configuration table, and implementation details.
- Training strategy now states subject-dependent, LOSO, pooled pre-training, and fine-tuning protocols explicitly.
- RL section now defines state, action, reward, and network settings clearly.

2. Handbook and Template Alignment — Structural Rework

Handbook / Template Requirements Checked

- A4, 2 cm margins, 1.5 spacing, left-aligned text
- Calibri 12 or close equivalent
- Template-like front matter
- Main-body Project Management section
- Required appendices and GitHub link

Font Constraint

True Calibri is not installed on this machine. The report now uses **XeLaTeX** with automatic fallback to **Carlito**, which is a close Calibri-compatible alternative.

Structural Changes Made

- Added title page, abstract, declaration of originality, intellectual property statement, and acknowledgements.
- Renamed **Methodology** to **Methods** to match the template style.
- Added chapter-level introduction/summary structure in Literature Review, Methods, and Results & Discussion.
- Restored **Project Management** to the main body.
- Added appendix sections for proposal, Gantt chart, risk material, CPD log, and repository link.

3. Final Review Fixes Completed This Week

Issue	Action Taken	Status
Project Management not in main body	Added a dedicated main-body chapter before Conclusions	Fixed
Discussion claims too strong	Reworded several interpretive claims using more cautious evidence-based language	Fixed
Figure 1 text too small	Removed hard full-width shrink, enlarged internal font, tightened layout	Fixed
Risk appendix path outdated	Updated appendix reference to the new files in 05_Documentation	Fixed
Overuse of "subject"	Partially normalised to "participant" in the revised sections	Improved

New Risk Files Referenced

05_Documentation/Risk assessment form-11314389_v3.docx

05_Documentation/Risk assessment form-11314389_v3.pdf

4. Current Draft v10 — Report Status Summary

Area	Current v10 Status	State
Methodology chapter	Rewritten around reproducibility and protocol clarity	✓
Results chapter separation	Quantitative outcomes moved out of Methods	✓
EEGTransformer documentation	Figure + config table + implementation detail	✓
RL formulation	State/action/reward/network protocol specified	✓
Front matter	Template-style title and declaration pages added	✓
Project Management	Back in main body	✓
Appendices	Structure added; risk files now concretely referenced	✓
PDF compilation	XeLaTeX build successful	✓
Font	Carlito fallback, not true Calibri	Known limit
Missing appendix artefacts	Proposal / Gantt / CPD still need final inserted copies	Needs final package

Current compiled report length: 31 pages

5. What the Marker Now Sees in v10

Front of Report

- Title page and front matter completed
- Abstract with key numerical results
- Declaration of originality
- Intellectual property statement
- Acknowledgements

Middle of Report

- Methods rewritten to read like a proper protocol chapter
- Results and Discussion separated cleanly
- Project Management included in the main body

End of Report

- Conclusions and Future Work
- References
- Appendix placeholders converted into structured appendix sections
- GitHub repository link included
- Risk-assessment files now explicitly referenced

Most Important Improvement

The draft now looks much more like a final-year report submission and much less like a technical write-up assembled section by section.

6. Timeline and Next Steps

Completed This Week

1. Methodology rewritten based on feedback
2. Handbook/template alignment completed
3. Final review issues resolved
4. v10 compiled and verified

Next Steps Before Submission

- Insert the final copies of the proposal, Gantt chart, and CPD artefacts into the appendix package.
- Perform one last language-and-consistency pass across the full report.
- Confirm that the current 31-page main body stays within the handbook page limit after final appendix packaging.
