

Weekly Progress Report

Week 31 — Easter Break Final Draft Revision

Student ID: 11314389

BCI Control System Project

April 22, 2026

Week 31 Agenda — Holiday Work on the Final Draft

Main Focus After the Wednesday Meeting

- ① Rewrite the **Methods** chapter based on the annotated feedback on the report draft.
- ② Bring the report structure closer to the **3YP Handbook** and the official **Report Template**.
- ③ Use the holiday period to convert the draft from a strong technical report into a more submission-ready final-year project report.
- ④ Resolve the remaining review issues in language, structure, figures, and appendices.

Overall Outcome

Final Report Draft v10 was produced, reorganised, and recompiled during the holiday period. The report is now much closer to the expected final submission format.

1. Holiday Priority Shift — From Experiments to Report Consolidation

Priority Before the Break

- Core experiments already complete
- Main quantitative results already established
- Main risk was no longer model performance
- Main risk became report clarity and submission readiness

Working Decision

The holiday period was used mainly for report restructuring and quality improvement rather than for adding new technical experiments.

Holiday Workstreams

- Rewrite the Methods chapter
- Tighten chapter boundaries
- Align with handbook and template requirements
- Clean up appendix structure and repository evidence
- Improve overall readability for the marker

2. Methods Rewrite Based on Feedback

Problems in the Earlier Draft

- Methods and results were still mixed together
- Reproducibility details were incomplete
- Experimental protocol boundaries were unclear
- Some explanation was placed too early in the report

Revision Goal

Make Chapter 3 read like a reproducible **Methods** chapter rather than a hybrid of methods, results, and interpretation.

What Was Added or Clarified

- Dataset table with channels, sampling rates, classes, and protocol
- Clear preprocessing description: 8–30 Hz filter, epoching, normalisation
- EEGTransformer architecture figure and configuration table
- Explicit training protocols for subject-dependent, LOSO, pooled training, and fine-tuning
- RL state, action, reward, and optimisation settings

3. Handbook and Template Alignment During the Break

Formatting / Structure Checked

- A4 paper, 2 cm margins, 1.5 spacing
- Left-aligned main text
- Calibri 12 or close equivalent
- Main-body Project Management section
- Required appendix and repository material

Font Status

True Calibri is not installed locally, so the report now uses XeLaTeX with automatic fallback to Carlito, a close compatible alternative.

Structural Changes Completed

- Added title page and front matter
- Renamed **Methodology** to **Methods**
- Separated **Results and Discussion** more clearly
- Restored **Project Management** to the main body
- Added organised appendix sections and GitHub links

4. Additional Final-Draft Fixes Completed in the Holiday Period

Issue	Action Taken	Status
Project Management placement	Returned to the main body	Fixed
Discussion phrasing too strong	Reworded using more cautious, evidence-based language	Fixed
System overview figure readability	Enlarged internal font and removed hard shrink behaviour	Fixed
Risk appendix reference outdated	Updated appendix references to the new files in 05_Documentation	Fixed
Supervisor-style wording	Replaced with more neutral wording	Fixed
Terminology consistency	Partially normalised “subject” to “participant”	Improved

Risk Files Now Referenced

05_Documentation/Risk assessment form-11314389_v3.docx

05_Documentation/Risk assessment form-11314389_v3.pdf

5. Current Status of Final Report Draft v10

Area	Current Status	State
Methods chapter	Fully rewritten around protocol clarity	✓
Results separation	Quantitative results moved out of Methods	✓
Model documentation	Figure, config table, and implementation detail	✓
RL formulation	State/action/reward/training setup specified	✓
Front matter	Added and aligned with template style	✓
Project Management	Included in main body	✓
Appendix structure	Organised; risk material linked	✓
PDF compilation	XeLaTeX build successful	✓
True Calibri font	Not available on this machine	Known limit
Final appendix artefacts	Proposal / Gantt / CPD still need final copies	To insert

Current compiled report length: 31 pages

6. Next Steps After the Holiday Revision

Completed During the Break

- Rewrote the Methods chapter
- Restructured the report to match the template more closely
- Resolved the main issues identified in re-review
- Recompiled and checked Final Report Draft v10

Still to Finish Before Submission

- Insert the final proposal, Gantt chart, and CPD appendix material
- Perform one more language and consistency pass
- Check that the final submission package remains comfortably within handbook expectations

Summary

The holiday period was used effectively to move the project from experimental completion to final report consolidation. The main remaining work is now packaging and final consistency checking rather than substantial technical revision.
